**Editor's Note:** *EarthBeat Weekly* is your weekly newsletter about faith and climate change. Below is the April 30 edition. To receive *EarthBeat Weekly* in your inbox, [sign up here](#).

In these times of upheaval, when a pandemic, political changes and economic uncertainty are converging in much of the world, a new CBS poll shows that turning concern about climate change into action remains a challenge.

The survey teases apart some of those attitudes in the U.S. For example, it finds that people are [willing to sacrifice, but only up to a point](#), and that many views [break down along ideological lines](#).

Among four priority issues — the economy, the coronavirus pandemic, immigration and climate change — most people (68%) rank the economy at the top, followed by the pandemic (65%) and immigration (54%). Less than half (46%) place high priority on climate change, a finding similar to those of pre-election polls.

Nevertheless, slightly more than half of adults in the U.S. — 56% — think climate change should be addressed "right now," and nearly as many, 53%, approve of the way President Joe Biden is handling the issue, according to the poll.

CBS conducted the survey between April 13 and 16, and it has a margin of error of plus or minus 2.8 percentage points. CBS, like EarthBeat, is a partner in the Covering Climate Now consortium.

While the conviction that climate change is urgent is fairly consistent across age groups, more women (63%) than men (49%) feel strongly about it, as do more Black respondents (68%). The opinion that it doesn't need to be addressed at all is strongest among conservatives (46%), although more than 25% of people over age 45 also share that view.

So how should we respond to climate change?

Overall, 58% of those polled said we should try to do things to shape and change the situation, while 42% said we should learn to adapt and make the best of it. The "shape and change" attitude was fairly consistent among age groups, but far higher among people who identified as liberal (77%) or moderate (65%) than conservative (35%).

What are people willing to do? That's a bit more complicated.

Nearly two-thirds said they'd install solar panels. Slightly fewer (57%) were willing to drive less, though only 42% said they would use public transit. Pandemic lockdowns might have skewed our sense of the need to drive, and only time will tell if teleworking reduces vehicle use in the long term.

While people say they'd buy "eco-friendly" products, studies show most are reluctant to pay more. (Toa Heftiba/Unsplash)

But only about one-third of respondents were willing to pay more for utilities or accept higher taxes. And the poll did not include any questions about reducing consumption (except for meat — just 30% said they would be willing to stop eating it) or paying more for products and services to cover their true environmental and

social costs.

That's the elephant in the room. The environmental cost of many products — like a wedding ring made of gold that came from an unregulated mine carved out of an Amazonian forest, or crackers made with palm oil from an Indonesian island where forest was razed for a plantation — is generally invisible to the buyer in a faraway country.

And although as many as seven out of 10 people [say they would buy environmentally friendly products](#), only a small percentage of consumers actually do "buy green."

An [analysis of various studies](#) of consumer behavior indicates that the reasons generally are high price, low availability and skepticism about "eco-friendly" labeling — pointing to a need for behavior changes on the part of manufacturers, as well as consumers, the authors say.

But Americans are skeptical about more than just green labeling, according to the CBS poll. Many question the motives of those who advocate for action on climate change.

While two-thirds think such groups are driven by a desire to preserve the environment, nearly as many believe they are trying to protect their own business interests in alternative energy sources. And nearly half (47%) say those groups are really out to destroy the fossil fuel industry.

So what's the lesson here for people of faith?

Brian H. Smith, professor emeritus of religion at Ripon College in Wisconsin, notes that while leaders of the major faiths have issued strong statements on climate and the environment — including, of course, Pope Francis' 2015 encyclical "*Laudato Si'*, on Care for Our Common Home" — their followers haven't necessarily put those messages into action.

In a commentary on EarthBeat this week, he suggests that faith leaders [could be doing more](#) to motivate people of faith to act on climate issues, and he offers some suggestions. They include speaking out about climate change as a pro-life issue, making sure people know about the related documents from their faith traditions, and finding ways to connect with young adults who are concerned about

environmental issues but unlikely to be in the pews.

I invite you to give Smith's commentary a close read and then tell us: Is the leader of your diocese or faith community rising to this challenge? What steps would you like them to take? Drop us a line at [earthbeat@ncronline.org](mailto:earthbeat@ncronline.org), and we'll share your thoughts.

### **Here's what else is new on EarthBeat this week:**

- NCR environment correspondent Brian Roewe reports that students at Marquette University are waiting for a response from school officials after 87% of students who cast ballots in a referendum [called on the Jesuit college to divest from fossil fuels](#).
- Roewe also had a story on a virtual panel discussion at Georgetown University in which participants described how [worldviews can collide](#) when missionaries go to work in the Amazon.
- Biden announced climate policy changes that angered politicians, and especially activists, on both the right and the left — usually a telltale sign that [the correct path has been charted](#), writes NCR political columnist Michael Sean Winters.
- From an eco-farm in the Philippines to a religious community founded to heal and protect the planet's life systems, the newest installment in Global Sisters Report's The Life series describes many ways in which women religious [actively care for the Earth](#).
- "You can't make progress on the economic front [without respecting the environmental front](#)," San Diego Bishop Robert McElroy, recently appointed to the board of the Vatican's Dicastery for Promoting Integral Human Development, tells NCR national correspondent Christopher White.
- And in a Small Earth Story, Viterbo University student Cali Gurnicki reflects on [what earthworms have taught her about spirituality](#).

## Here's some of what's new in other climate news:

- At Politico, Ryan Heath explains [why some world leaders are skeptical](#) about whether Biden will be able to deliver on the new U.S. climate pledges, and why it's so difficult to compare different countries' greenhouse gas-reduction commitments.
  - This week, the U.S. Senate, along party lines, [reinstated limits on methane leaks](#) from oil and gas operations, Tik Root, Juliet Eilperin and Brady Dennis report for The Washington Post. Taking quick action to reduce methane, a greenhouse gas 80 times more potent than carbon dioxide, [could slow Earth's rate of warming by 30%](#), according to a new study also covered by Dennis and Steven Mufson for the Post.
  - Eight months after lightning sparked hundreds of wildfires in northern California, [Big Basin Redwoods State Park is recovering](#) from the scorching, writes Martha Mendoza at the Associated Press.
  - And a [controversial highway project in the Amazon](#) would cut across a highly biodiverse protected area and at least 10 Indigenous communities and open up a route for drug traffickers and illegal loggers, report Alexa Vélez, Vanessa Romo and Fabiano Maisonnave for Stories without Borders, a project of InquireFirst. Don't miss the spectacular photos with this story.

## Upcoming events:

As part of a process to help the Canadian Catholic community make decisions about its investments, on May 5 at 1:30 p.m. Eastern Time, the Canadian Chapter of the Global Catholic Climate Movement will hold the third of four sessions of a virtual forum on the Catholic eco-investment accelerator. The theme will be "Indigenous and Impact Investment."

You can find more information about this and other coming events on the [EarthBeat Events page](#).
