

Going vegetarian could help save the planet

Thomas C. Fox | Oct. 28, 2009 NCR Today

Meat production is causing 18 percent of global gas emission and meat consumption continues to climb, according to the United Nations. Eating less (or no) meat [could make a major difference in climate control](#). [1]

We are changing our driving habits and the types of cars we drive. Isn't it time we gave consideration to going vegetarian?
