

Urban garden sites tainted with harmful chemicals

Rich Heffern | Mar. 23, 2011 Eco Catholic

With remnants of once-legal lead paint, leaded gasoline and other pollutants from the nation's industrial past tainting land in U.S. cities, soil researchers warn that the growing number of urban farmers and community gardeners need to test their dirt and take steps to make sure it's safe.

An [article](#) [1] on The Huffington Post blog details the threat to urban gardeners across the country.
